

# Utility ProWear™

**2012-2013  
High Visibility  
Workwear Catalog**

# My Life History.

2 months on a dusty road running a backhoe

6 weeks handling baggage in December

3 months on tow truck recovery crew

1 month of road work on Interstate 81

1 year in the back of a pickup truck

## DuPont™ Teflon® Fabric Protector

### Attribute

Teflon® fabric protector forms a molecular barrier around each individual fiber. This barrier lowers the critical surface tension of the fabric so it repels most water- and oil-based liquids. Fabrics become water- and oil-repellent without changing the color or feel of the garment.

### Benefits

Liquid spills bead up and roll off, and any residue can be easily wiped away or blotted with a clean cloth. Dry soils can be easily brushed away. Testing has shown fabrics treated with Teflon® repellent technology dry faster than untreated fabrics.

### Safety

The ability of Teflon® brand repellents to resist dirt and grime, gives the reflective apparel a higher level of effectiveness for a longer period of time. Also Teflon® fabric protector can mean less washing which adds life to the garment, reduces energy use and extends the reflective properties of the tape.

### Quality and Durability Standards

All DuPont™ Teflon® fabric protector products must pass stringent brand assurance criteria. These are outlined in the *DuPont Global Specifications and Quality Control Tests for Fabrics Treated with DuPont™ Teflon® fabric protector*. DuPont is an industry leader in brand assurance, with thousands of samples tested annually in order to carry the Teflon® brand.

## Utility Pro Wear™

### Our Mission?

To provide you with high quality products combined with the best customer service from order placement, to delivery and beyond. Our long term alliances with high quality factories, along with our on sight quality control insures that the product ordered is the product delivered every time. We thank you for your patronage and look forward to serving you.

### Why High Visibility Clothing?

In 2008 the Federal Code 23{FCR23} was adopted. It states that all workers within the right of way of a Federal Aid Highway who are exposed to traffic or equipment within the work area must wear ANSI Class 2 or 3 high visibility garments. This was created as a response to an increase in roadside injuries and accidents.

### Which Is The Right High Visibility Garment For You?

Enhancing worker visibility is an ever-present challenge. Garment selection should be based on the color and complexity of the work environment, the work task being done, and the separation of the worker from moving equipment and vehicles. Best practices guidelines — like the standards outlined in ANSI 107-2010 — provide practical instruction regarding both reflective material and garment design. These guidelines also define classes of garments as most appropriate, depending on the level of risk in the work environment. For a complete explanation of the ANSI guidelines, go to <http://utilityproworkwear.com/ansi-standards/>

◀ **UHV563  
Bomber Jacket with  
Zip Out Fleece Liner**
